

Q1 protruding to the outside, the stator is injection molded by resin and thereafter the extraction terminal is electrically connected to the PC board, wherein the whole of the PC board is molded by resin.

5. (Amended) A manufacturing method of a blower comprising:

a bearing box for housing a bearing in the center portion of a cylindrical casing is formed;

a rotor is held on a shaft supported rotatably on the bearing;

a stator comprising a stator core and a coil held on the periphery of the bearing box;

Q2 a ring-shaped magnet is provided on the rotor spaced from the stator at a given gap; and

a PC board connected to an extraction terminal of the coil and provided with an electronic circuit for controlling a current to the coil, wherein the extraction terminal is protruding to the outside, the stator is injection molded by resin and thereafter the extraction terminal is electrically connected to the PC board, wherein the whole of the PC board is molded by resin.

REMARKS

Claims 1-8 are pending. By this Amendment, claims 1 and 5 are amended. The attached Appendix includes a marked-up copy of each rewritten claim (37 C.F.R. §1.121(c)(1)(ii)).

The Office Action rejects claims 5-8 under 35 U.S.C. §112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which Applicant regards as the invention. Specific language in claim 5 is identified as forming the basis for the rejection. The claim is amended in reply to the rejection. The Office Action does not identify language forming the basis of the rejection of claims 6-8,
